Preface

We would like to present, with great pleasure, the inaugural volume-9, Issue-3, February 2023, of a scholarly journal, *International Journal of Engineering Research & Science*. This journal is part of the AD Publications series *in the field of Engineering, Mathematics, Physics, Chemistry and science Research Development*, and is devoted to the gamut of Engineering and Science issues, from theoretical aspects to application-dependent studies and the validation of emerging technologies.

This journal was envisioned and founded to represent the growing needs of Engineering and Science as an emerging and increasingly vital field, now widely recognized as an integral part of scientific and technical investigations. Its mission is to become a voice of the Engineering and Science community, addressing researchers and practitioners in below areas

Chemical Engineering	
Biomolecular Engineering	Materials Engineering
Molecular Engineering	Process Engineering
Corrosion Engineering	
Civil Engineering	
Environmental Engineering	Geotechnical Engineering
Structural Engineering	Mining Engineering
Transport Engineering	Water resources Engineering
Electrical Engineering	
Power System Engineering	Optical Engineering
Mechanical Engineering	
Acoustical Engineering	Manufacturing Engineering
Optomechanical Engineering	Thermal Engineering
Power plant Engineering	Energy Engineering
Sports Engineering	Vehicle Engineering
Software Engineering	
Computer-aided Engineering	Cryptographic Engineering
Teletraffic Engineering	Web Engineering
System Engineering	
Mathematics	
Arithmetic	Algebra
Number theory	Field theory and polynomials
Analysis	Combinatorics
Geometry and topology	Topology
Probability and Statistics	Computational Science
Physical Science	Operational Research
Physics	
Nuclear and particle physics	Atomic, molecular, and optical physics
Condensed matter physics	Astrophysics
Applied Physics	Modern physics
Philosophy	Core theories

Chemistry	
Analytical chemistry	Biochemistry
Inorganic chemistry	Materials chemistry
Neurochemistry	Nuclear chemistry
Organic chemistry	Physical chemistry
Other Engineering Areas	
Aerospace Engineering	Agricultural Engineering
Applied Engineering	Biomedical Engineering
Biological Engineering	Building services Engineering
Energy Engineering	Railway Engineering
Industrial Engineering	Mechatronics Engineering
Management Engineering	Military Engineering
Petroleum Engineering	Nuclear Engineering
Textile Engineering	Nano Engineering
Algorithm and Computational Complexity	Artificial Intelligence
Electronics & Communication Engineering	Image Processing
Information Retrieval	Low Power VLSI Design
Neural Networks	Plastic Engineering

Each article in this issue provides an example of a concrete industrial application or a case study of the presented methodology to amplify the impact of the contribution. We are very thankful to everybody within that community who supported the idea of creating a new Research with IJOER. We are certain that this issue will be followed by many others, reporting new developments in the Engineering and Science field. This issue would not have been possible without the great support of the Reviewer, Editorial Board members and also with our Advisory Board Members, and we would like to express our sincere thanks to all of them. We would also like to express our gratitude to the editorial staff of AD Publications, who supported us at every stage of the project. It is our hope that this fine collection of articles will be a valuable resource for *IJOER* readers and will stimulate further research into the vibrant area of Engineering and Science Research.

Mukesh Arora
(Chief Editor)

Board Members

Mr. Mukesh Arora (Editor-in-Chief)

BE (Electronics & Communication), M.Tech (Digital Communication), currently serving as Assistant Professor in the Department of ECE.

Prof. Dr. Fabricio Moraes de Almeida

Professor of Doctoral and Master of Regional Development and Environment - Federal University of Rondonia.

Dr. Parveen Sharma

Dr Parveen Sharma is working as an Assistant Professor in the School of Mechanical Engineering at Lovely Professional University, Phagwara, Punjab.

Prof. S. Balamurugan

Department of Information Technology, Kalaignar Karunanidhi Institute of Technology, Coimbatore, Tamilnadu, India.

Dr. Omar Abed Elkareem Abu Arqub

Department of Mathematics, Faculty of Science, Al Balqa Applied University, Salt Campus, Salt, Jordan, He received PhD and Msc. in Applied Mathematics, The University of Jordan, Jordan.

Dr. AKPOJARO Jackson

Associate Professor/HOD, Department of Mathematical and Physical Sciences, Samuel Adegboyega University, Ogwa, Edo State.

Dr. Ajoy Chakraborty

Ph.D.(IIT Kharagpur) working as Professor in the department of Electronics & Electrical Communication Engineering in IIT Kharagpur since 1977.

Dr. Ukar W. Soelistijo

Ph D, Mineral and Energy Resource Economics, West Virginia State University, USA, 1984, retired from the post of Senior Researcher, Mineral and Coal Technology R&D Center, Agency for Energy and Mineral Research, Ministry of Energy and Mineral Resources, Indonesia.

Dr. Samy Khalaf Allah Ibrahim

PhD of Irrigation &Hydraulics Engineering, 01/2012 under the title of: "Groundwater Management under Different Development Plans in Farafra Oasis, Western Desert, Egypt".

Dr. Ahmet ÇİFCİ

Ph.D. in Electrical Engineering, Currently Serving as Head of Department, Burdur Mehmet Akif Ersoy University, Faculty of Engineering and Architecture, Department of Electrical Engineering.

Dr. M. Varatha Vijayan

Annauniversity Rank Holder, Commissioned Officer Indian Navy, Ncc Navy Officer (Ex-Serviceman Navy), Best Researcher Awardee, Best Publication Awardee, Tamilnadu Best Innovation & Social Service Awardee From Lions Club.

Dr. Mohamed Abdel Fatah Ashabrawy Moustafa

PhD. in Computer Science - Faculty of Science - Suez Canal University University, 2010, Egypt.

Assistant Professor Computer Science, Prince Sattam bin AbdulAziz University ALkharj, KSA.

Prof.S.Balamurugan

Dr S. Balamurugan is the Head of Research and Development, Quants IS & CS, India. He has authored/co-authored 35 books, 200+ publications in various international journals and conferences and 6 patents to his credit. He was awarded with Three Post-Doctoral Degrees - Doctor of Science (D.Sc.) degree and Two Doctor of Letters (D.Litt) degrees for his significant contribution to research and development in Engineering.

Dr. Mahdi Hosseini

Dr. Mahdi did his Pre-University (12th) in Mathematical Science. Later he received his Bachelor of Engineering with Distinction in Civil Engineering and later he Received both M.Tech. and Ph.D. Degree in Structural Engineering with Grade "A" First Class with Distinction.

Dr. Anil Lamba

Practice Head – Cyber Security, EXL Services Inc., New Jersey USA.

Dr. Anil Lamba is a researcher, an innovator, and an influencer with proven success in spearheading Strategic Information Security Initiatives and Large-scale IT Infrastructure projects across industry verticals. He has helped bring about a profound shift in cybersecurity defense. Throughout his career, he has parlayed his extensive background in security and a deep knowledge to help organizations build and implement strategic cybersecurity solutions. His published researches and conference papers has led to many thought provoking examples for augmenting better security.

Dr. Ali İhsan KAYA

Currently working as Associate Professor in Mehmet Akif Ersoy University, Turkey.

Research Area: Civil Engineering - Building Material - Insulation Materials Applications, Chemistry - Physical Chemistry – Composites.

Dr. Parsa Heydarpour

Ph.D. in Structural Engineering from George Washington University (Jan 2018), GPA=4.00.

Dr. Heba Mahmoud Mohamed Afify

Ph.D degree of philosophy in Biomedical Engineering, Cairo University, Egypt worked as Assistant Professor at MTI University.

Dr. Aurora Angela Pisano

Ph.D. in Civil Engineering, Currently Serving as Associate Professor of Solid and Structural Mechanics (scientific discipline area nationally denoted as ICAR/08—"Scienza delle Costruzioni"), University Mediterranea of Reggio Calabria, Italy.

Dr. Faizullah Mahar

Associate Professor in Department of Electrical Engineering, Balochistan University Engineering & Technology Khuzdar. He is PhD (Electronic Engineering) from IQRA University, Defense View, Karachi, Pakistan.

Prof. Viviane Barrozo da Silva

Graduated in Physics from the Federal University of Paraná (1997), graduated in Electrical Engineering from the Federal University of Rio Grande do Sul - UFRGS (2008), and master's degree in Physics from the Federal University of Rio Grande do Sul (2001).

Dr. S. Kannadhasan

Ph.D (Smart Antennas), M.E (Communication Systems), M.B.A (Human Resources).

Dr. Christo Ananth

Ph.D. Co-operative Networks, M.E. Applied Electronics, B.E Electronics & Communication Engineering Working as Associate Professor, Lecturer and Faculty Advisor/ Department of Electronics & Communication Engineering in Francis Xavier Engineering College, Tirunelveli.

Dr. S.R.Boselin Prabhu

Ph.D, Wireless Sensor Networks, M.E. Network Engineering, Excellent Professional Achievement Award Winner from Society of Professional Engineers Biography Included in Marquis Who's Who in the World (Academic Year 2015 and 2016). Currently Serving as Assistant Professor in the department of ECE in SVS College of Engineering, Coimbatore.

Dr. PAUL P MATHAI

Dr. Paul P Mathai received his Bachelor's degree in Computer Science and Engineering from University of Madras, India. Then he obtained his Master's degree in Computer and Information Technology from Manonmanium Sundaranar University, India. In 2018, he received his Doctor of Philosophy in Computer Science and Engineering from Noorul Islam Centre for Higher Education, Kanyakumari, India.

Dr. M. Ramesh Kumar

Ph.D (Computer Science and Engineering), M.E (Computer Science and Engineering).

Currently working as Associate Professor in VSB College of Engineering Technical Campus, Coimbatore.

Dr. Maheshwar Shrestha

Postdoctoral Research Fellow in DEPT. OF ELE ENGG & COMP SCI, SDSU, Brookings, SD Ph.D, M.Sc. in Electrical Engineering from SOUTH DAKOTA STATE UNIVERSITY, Brookings, SD.

Dr. D. Amaranatha Reddy

Ph.D. (Postdoctoral Fellow, Pusan National University, South Korea), M.Sc., B.Sc. : Physics.

Dr. Dibya Prakash Rai

Post Doctoral Fellow (PDF), M.Sc., B.Sc., Working as Assistant Professor in Department of Physics in Pachhunga University College, Mizoram, India.

Dr. Pankaj Kumar Pal

Ph.D R/S, ECE Deptt., IIT-Roorkee.

Dr. P. Thangam

PhD in Information & Communication Engineering, ME (CSE), BE (Computer Hardware & Software), currently serving as Associate Professor in the Department of Computer Science and Engineering of Coimbatore Institute of Engineering and Technology.

Dr. Pradeep K. Sharma

PhD., M.Phil, M.Sc, B.Sc, in Physics, MBA in System Management, Presently working as Provost and Associate Professor & Head of Department for Physics in University of Engineering & Management, Jaipur.

Dr. R. Devi Priya

Ph.D (CSE), Anna University Chennai in 2013, M.E, B.E (CSE) from Kongu Engineering College, currently working in the Department of Computer Science and Engineering in Kongu Engineering College, Tamil Nadu, India.

Dr. Sandeep

Post-doctoral fellow, Principal Investigator, Young Scientist Scheme Project (DST-SERB), Department of Physics, Mizoram University, Aizawl Mizoram, India- 796001.

Dr. Roberto Volpe

Faculty of Engineering and Architecture, Università degli Studi di Enna "Kore", Cittadella Universitaria, 94100 – Enna (IT).

Dr. S. Kannadhasan

Ph.D (Smart Antennas), M.E (Communication Systems), M.B.A (Human Resources).

Research Area: Engineering Physics, Electromagnetic Field Theory, Electronic Material and Processes, Wireless Communications.

Mr. Amit Kumar

Amit Kumar is associated as a Researcher with the Department of Computer Science, College of Information Science and Technology, Nanjing Forestry University, Nanjing, China since 2009. He is working as a State Representative (HP), Spoken Tutorial Project, IIT Bombay promoting and integrating ICT in Literacy through Free and Open Source Software under National Mission on Education through ICT (NMEICT) of MHRD, Govt. of India; in the state of Himachal Pradesh, India.

Mr. Tanvir Singh

Tanvir Singh is acting as Outreach Officer (Punjab and J&K) for MHRD Govt. of India Project: Spoken Tutorial - IIT Bombay fostering IT Literacy through Open Source Technology under National Mission on Education through ICT (NMEICT). He is also acting as Research Associate since 2010 with Nanjing Forestry University, Nanjing, Jiangsu, China in the field of Social and Environmental Sustainability.

Mr. Abilash

MTech in VLSI, BTech in Electronics & Telecommunication engineering through A.M.I.E.T.E from Central Electronics Engineering Research Institute (C.E.E.R.I) Pilani, Industrial Electronics from ATI-EPI Hyderabad, IEEE course in Mechatronics, CSHAM from Birla Institute Of Professional Studies.

Mr. Varun Shukla

M.Tech in ECE from RGPV (Awarded with silver Medal By President of India), Assistant Professor, Dept. of ECE, PSIT, Kanpur.

Mr. Shrikant Harle

Presently working as a Assistant Professor in Civil Engineering field of Prof. Ram Meghe College of Engineering and Management, Amravati. He was Senior Design Engineer (Larsen & Toubro Limited, India).

Zairi Ismael Rizman

Senior Lecturer, Faculty of Electrical Engineering, Universiti Teknologi MARA (UiTM) (Terengganu) Malaysia Master (Science) in Microelectronics (2005), Universiti Kebangsaan Malaysia (UKM), Malaysia. Bachelor (Hons.) and Diploma in Electrical Engineering (Communication) (2002), UiTM Shah Alam, Malaysia.

Mr. Ronak

Qualification: M.Tech. in Mechanical Engineering (CAD/CAM), B.E.

Presently working as a Assistant Professor in Mechanical Engineering in ITM Vocational University, Vadodara. Mr. Ronak also worked as Design Engineer at Finstern Engineering Private Limited, Makarpura, Vadodara.

Abstract— The mathematical model of nitrogen oxides production described in the paper is developed on the basis of dimensional analysis. The theory of dimensional analysis is used when a mathematical description of a phenomenon is lacking. The aim of using this method was to find out what is the relationship between the parameters of an operating hard coal combustion plant (boiler output, fuel calorific value, quantity and temperature of combustion air, negative pressure in the boiler and flue gas temperature) and the nitrogen oxides produced. The results obtained from the developed model are compared with the values measured on a real device.

Keywords— modelling, dimensional analysis, nitrogen oxides.

I. INTRODUCTION

The production of nitrogen oxides during the combustion of fossil fuels in large boilers is influenced by a number of operating parameters. The dependence between the amount of nitrogen oxides produced and the individual parameters can also be expressed by means of dimensional analysis. The NO_x generation model described in the paper was developed based on the results of measurements on a specific boiler. The information obtained from a given boiler can then be transferred to any other boiler that is physically similar to the analysed model.

II. DESCRIPTION OF THE MODEL

Currently, several mathematical models of nitrogen oxide production are known [1-3], which are based on the analysis of fuel composition and combustion reaction rates. Knowledge of the fuel composition and reaction rates is not sufficient to describe the actual combustion process in detail. Therefore, the derived models are not always relevant. Other research works [4-5] investigate e.g. the residence time of powdered fuel in the reduction zone or simulate the combustion process using CFD methods.

Dimensional analysis, based on the principle of dimensional homogeneity of equations, was used to derive the presented mathematical model. In the general case, it is always a complete physical equation that expresses the dependence of a total of n selected relevant physical quantities $V_1, V_2, \dots, V_n$ of different dimensions [6-9]. The equation has the form:

$$\varphi(V_1, V_2, \dots, V_n) = 0 \quad (1)$$

Of the relevant quantities affecting NO_x emissions, those that characterise the operation of the boiler were included in the mathematical model. These quantities were selected based on the experience of the boiler operator. The values of all quantities were measured continuously. These are:

- ✓ lower calorific value of coal Q_c (J·kg⁻¹)
- ✓ mass flow rate of steam $Q_{m,s}$ (kg·s⁻¹)

- ✓ volume flow rate of combustion air $Q_{V,air}$ ($m^3 \cdot s^{-1}$)
- ✓ negative pressure in the boiler p_v (Pa)
- ✓ flue gas temperature at boiler outlet T_{fg} (K)
- ✓ combustion air temperature T_{air} (K)

Relation (1) for selected relevant quantities, including nitrogen oxides, takes the form

$$f(Q_c, Q_{m,s}, Q_{V,air}, p_v, NO_x, T_{fg}, T_{air}) = 0 \quad (2)$$

Temperature occurs twice in the selected quantities in relation (2). Measurements on the boiler analysed showed that the T_{fg}/T_{air} ratio was practically unchanged. Its value was 0.852. In the next solution, according to the rules of dimensional analysis, the temperature can occur only once. In the following model it is the flue gas temperature at the boiler outlet T_{fg} .

The constructed dimensional matrix is made of all dimensions of the selected quantities. The condition for the use of dimensional analysis is that the units of the respective physical quantities in the dimensional matrix are transformed into SI units. E.g. Q_c ($J \cdot kg^{-1} \approx N \cdot m \cdot kg^{-1} \approx kg \cdot m \cdot s^{-2} \cdot m \cdot kg^{-1} = m^2 \cdot s^{-2}$).

For the six selected quantities, the matrix will have $n = 6$ columns and $m = 4$ rows. Its shape is

$$\begin{array}{c} Q_c \quad Q_{m,s} \quad Q_{V,air} \quad p_v \quad NO_x \quad T_{fg} \\ \begin{array}{l} m \\ s \\ kg \\ K \end{array} \left\| \begin{array}{cccccc} 2 & 0 & 3 & -1 & -3 & 0 \\ -2 & -1 & -1 & -2 & 0 & 0 \\ 0 & 1 & 0 & 1 & 1 & 0 \\ 0 & 0 & 0 & 0 & 0 & 1 \end{array} \right\| \end{array} \quad (3)$$

Finding dimensionless arguments (similarity criteria) that indicate the interdependence of the selected variables is done by the following procedure. The matrix (3) is split into two parts. One part represents the square matrix and the other part the complementary matrix (4). The unknown quantities x_1 to x_6 are added to both matrices so that their indices reflect the order of the selected quantity in the respective matrix - see equation (6)

$$\left\| \begin{array}{cccc} 2 & 0 & 3 & 0 \\ -2 & -1 & -1 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 1 \end{array} \right\| \cdot \left\| \begin{array}{c} x_1 \\ x_2 \\ x_3 \\ x_6 \end{array} \right\| = (-1) \cdot \left\| \begin{array}{cc} -3 & -1 \\ 0 & -2 \\ 1 & 1 \\ 0 & 0 \end{array} \right\| \cdot \left\| \begin{array}{c} x_5 \\ x_4 \end{array} \right\| \quad (4)$$

From equation (4), the unknown quantities x_1 to x_6 are found. These unknowns then characterize the dimensionless arguments π for which

$$\pi = \prod_{i=1}^n V_i^{x_i} \quad (5)$$

Then one can write

$$\pi = Q_c^{x_1} \cdot Q_{m,s}^{x_2} \cdot Q_{V,air}^{x_3} \cdot p_v^{x_4} \cdot NO_x^{x_5} \cdot T_{fg}^{x_6} \quad (6)$$

The choice of the redundant unknowns x_5 and x_4 from the right-hand side of equation (4) is made twice according to procedure (7)

$$\begin{array}{c} x_5 \quad x_4 \\ \begin{array}{l} 1. \text{ st sel.} \\ 2. \text{ nd sel.} \end{array} \left\| \begin{array}{cc} 1 & 0 \\ 0 & 1 \end{array} \right\| \end{array} \quad (7)$$

The solution of equation (4) leads to a system of linear equations of the form

$$\begin{aligned}
 2 \cdot x_1 + 3 \cdot x_3 &= 3 \cdot x_5 + x_4 \\
 -2 \cdot x_1 - x_2 - x_3 &= 2 \cdot x_4 \\
 x_2 &= -x_5 - x_4 \\
 x_6 &= 0
 \end{aligned} \tag{8}$$

The solution of system (8) results in two independent vectors (dimensionless arguments) π .

$$\begin{array}{c} x_1 \ x_2 \ x_3 \ x_4 \ x_5 \ x_6 \\ \pi_1 \left| \begin{array}{cccccc} 0 & -1 & 1 & 0 & 1 & 0 \\ -1 & -1 & 1 & 1 & 0 & 0 \end{array} \right| \\ \pi_2 \end{array} \tag{9}$$

The “minus” sign for a given unknown x_i , in the solution (9) indicates that the physical quantity in relation (6), amplified to the corresponding unknown x_i , will be in the denominator of the resulting argument, and the “plus” sign informs that the corresponding quantity will be in the numerator. Based on the above, two dimensionless arguments π of the form (10) can be established

$$\pi_1 = \frac{Q_{V,\text{air}} \cdot NO_x}{Q_{m,s}} \quad (1) \quad \text{and} \quad \pi_2 = \frac{Q_{V,\text{air}} \cdot p_v}{Q_c \cdot Q_{m,s}} \quad (1) \tag{10}$$

Dividing criterion π_1 by criterion π_2 yields a new criterion π_3 of the form (11)

$$\pi_3 = \frac{Q_c \cdot NO_x}{p_v} \quad (1) \tag{11}$$

Since the dimensionless argument π_3 contains the quantity NO_x , the dependence of which on other quantities in the black coal combustion process we want to determine, this argument can be expressed as a function of the argument π_2

$$\pi_3 = \varphi(\pi_2) \tag{12}$$

The argument π_3 can be displayed as a function of the dependent variable of the function π_2 in power form (13)

$$\pi_3 = A \cdot \pi_2^B \quad (1) \tag{13}$$

Logarithming equation (13) yields a line equation of the form

$$\log \pi_3 = \log A + \log B \cdot \log \pi_2 \tag{14}$$

The constant A and the regression coefficient B can be determined e.g. using an Excel spreadsheet (Fig. 1 and Fig. 2). Their values are $A = 0.0117$, $B = -0.7584$.

FIGURE 1: Dependence of dimensionless arguments in the sense of equation (14)

FIGURE 2: Dependence of dimensionless arguments in the sense of equation (13)

With the help of dimensional analysis, the NO_x production formation model will have the following form of dependence of the relevant dimensional quantities during the burning of black coal according to (13)

$$\frac{Q_c \cdot NO_x}{p_v} = A \cdot \left(\frac{Q_{V,air} \cdot p_v}{Q_c \cdot Q_{m,s}} \right)^B \quad (15)$$

The functional dependence of the formation of nitrogen oxides on other operating parameters will be in the form

$$NO_x = A \cdot Q_{V,air}^B \cdot Q_{m,s}^{-B} \cdot p_v^{1+B} \cdot Q_c^{-1-B} \quad (16)$$

After adding the calculated values of the constant A and the regression coefficient B to the expression (16), the relation for the production of nitrogen oxide has the form

$$NO_x = 0.0117 \cdot \left(\frac{Q_{V,air}}{Q_{m,s}} \right)^{-0.7584} \cdot \left(\frac{p_v}{Q_c} \right)^{1-0.7584} \quad (kg \cdot m^{-3}) \quad (17)$$

The general shape of the dependence of NO_x on selected relevant quantities is represented by the expression (18)

$$NO_x = C \cdot \left(\frac{Q_{V,air}}{Q_{m,s}} \right)^m \cdot \left(\frac{p_v}{Q_c} \right)^n \quad (kg \cdot m^{-3}) \quad (18)$$

where individual constants represent values: $C = 0.0117$, $m = -0.7584$, $n = 0.2416$.

Relationship (18) represents a mathematical model of NO_x production during the burning of black coal. Based on it, the calculated values of produced NO_x at specific measured values of the relevant variables are shown in Fig. 3. The deviation in NO_x expression ranges from +9.92 to -12.23%. The mean deviation is -0.21%.

FIGURE 3: Measured and calculated NO_x values

III. CONCLUSION

The difference between the measured and calculated values according to relation (18) can be justified by the fact that, when choosing the relevant quantities, all the influences on which NO_x depends on the combustion of fossil fuels were certainly not taken into account. For a more relevant description of the combustion process it would be necessary to include flame temperature among the selected variables. Because its measurement in online operation of the boiler is a problem, it was not included in the basic model of the boiler. Another variable that could be considered is the mass flow of the coal burned. In addition, the presented results are from a relatively small sample of measurements (only 24). With a large enough sample of data (on the order of 10^2), the results would be more accurate [10].

When using a method for determining NO_x production based on dimensional analysis, it is irrelevant to know the details of the combustion device itself, regarding its construction, combustion air distribution system, location of burners, etc. It is also irrelevant to investigate what happens if it changes during combustion, e.g. fuel moisture. All these influences are reflected in the model in the measured values of the quantities that make up the model itself.
